

COURSE DESCRIPTION

1. Program identification information

1.1 Higher education institution	National University of Science and Technology Politehnica Bucharest
1.2 Faculty	Electronics, Telecommunications and Information Technology
1.3 Department	Telecommunications
1.4 Domain of studies	Electronic Engineering, Telecommunications and Information Technology
1.5 Cycle of studies	Masters
1.6 Programme of studies	Advanced Software Technologies for Communications

2. Date despre disciplină

2.1 Course name (ro) (en)	Programare în limbajul Java pentru aplicații funcționând în arhitecturi TCP/IP						
2.2 Course Lecturer	S.I./Lect. Dr. Laurentiu BOICESCU						
2.3 Instructor for practical activities	S.I./Lect. Dr. Laurentiu BOICESCU						
2.4 Year of studies	2	2.5 Semester	I	2.6. Evaluation type	E	2.7 Course regime	Ob
2.8 Course type	DA	2.9 Course code	UPB.04.M3.O.09-55		2.10 Tipul de notare	Nota	

3. Total estimated time (hours per semester for academic activities)

3.1 Number of hours per week	3	Out of which: 3.2 course	2.00	3.3 seminary/laboratory	1
3.4 Total hours in the curricula	42.00	Out of which: 3.5 course	28	3.6 seminary/laboratory	14
Distribution of time:					hours
Study according to the manual, course support, bibliography and hand notes Supplemental documentation (library, electronic access resources, in the field, etc) Preparation for practical activities, homework, essays, portfolios, etc.					50
Tutoring					0
Examinations					8
Other activities (if any):					0
3.7 Total hours of individual study	58.00				
3.8 Total hours per semester	100				
3.9 Number of ECTS credit points	4				

4. Prerequisites (if applicable) (where applicable)

4.1 Curriculum	Communication networks Object-oriented Programming Databases Software Engineering for Telecommunications
4.2 Results of learning	General knowledge of programming Working with data structures, pointers, objects, classes Writing object-oriented programs

5. Necessary conditions for the optimal development of teaching activities (where applicable)

5.1 Course	In accordance with the university internal rules The lectures will take place in a room equipped with computer and video projector
5.2 Seminary/ Laboratory/Project	The laboratories will take place in a room equipped with video projector, computers with NetBeans IDE, web-server (Apache Tomcat), Database server (MySQL), virtual machine hypervisor (VirtualBox)

6. General objective (*Referring to the teachers' intentions for students and to what the students will be thought during the course. It offers an idea on the position of course in the scientific domain, as well as the role it has for the study programme. The course topics, the justification of including the course in the curricula of the study programme, etc. will be described in a general manner*)

The main objective of this course, related to the graduates' qualification, is to acquire the basic knowledge of the concepts, principles and design methods, construction and testing of telecommunication and Internet networks, as well as assurance of software development skills, using different languages, standards and design tools.

There will be concrete applications in which students will be involved in both software and hardware development.

7. Competences (*Proven capacity to use knowledge, aptitudes and personal, social and/or methodological abilities in work or study situations and for personal and professional growth. They reflect the employers requirements.*)

Specific Competences	<p>C3. The application of basic knowledge, concepts and methods on the architecture of computer systems, microcontrollers, programming languages and techniques</p> <p>C3.4 Writing software in object-oriented languages, starting from requirements up to the development, debugging and analysis of the results.</p> <p>C4. Writing technical specifications, procurement, deployment and operation of fixed and mobile communications equipment, as well as planning, configuration and integration of telecommunication services and information security elements - skills for applying general knowledge of advanced software technologies (Java, Qt / C ++, .NET / C #, PHP, MySQL, XML, etc.) to design and implement communication systems and services (web, mobile, etc.)</p> <p>C6. The use of programming languages and specialized tools for software engineering in integrated telecommunications systems</p> <p>C6.1 Definition of methodologies, languages and software instruments used in the development of communications software.</p> <p>C6.4 Use of object-oriented techniques for analysing and modeling software systems</p> <p>C6.5 Programming of web and networking application elements</p>
-----------------------------	--

Transversal (General) Competences	<p>CT1. The methodical analysis of the daily issues, identifying the problems for which well-known solutions are already available, thus accomplishing the professional tasks</p> <p>CT3. Accommodation to new technologies, personal and professional development, through continuous training using printed documentation, specialized software and digital resources in Romanian and, at least, one international language</p>
--	---

8. Learning outcomes (*Synthetic descriptions for what a student will be capable of doing or showing at the completion of a course. The learning outcomes reflect the student's accomplishments and to a lesser extent the teachers' intentions. The learning outcomes inform the students of what is expected from them with respect to performance and to obtain the desired grades and ECTS points. They are defined in concise terms, using verbs similar to the examples below and indicate what will be required for evaluation. The learning outcomes will be formulated so that the correlation with the competences defined in section 7 is highlighted.*)

Knowledge	<p><i>The result of knowledge acquisition through learning. The knowledge represents the totality of facts, principles, theories and practices for a given work or study field. They can be theoretical and/or factual.</i></p> <p>main programming and markup languages used in the development of web platforms (Java, HTML, CSS, JavaScript, SQL)</p> <p>programming models based on layered communications and the TCP/IP stack</p> <p>software engineering methodologies (design, implementation and debugging of web platforms)</p> <p>architectural models used in the development of web platforms</p>
Skills	<p><i>The capacity to apply the knowledge and use the know-how for completing tasks and solving problems. The skills are described as being cognitive (requiring the use of logical, intuitive and creative thinking) or practical (implying manual dexterity and the use of methods, materials, tools and instrumentation).</i></p> <p>Uses principles that are specific to the development of web applications and motivates the choices</p> <p>Works in a team</p> <p>Elaborates scientific text</p> <p>Verifies identified solutions through experiment</p> <p>Solves practical applications</p> <p>Analyses and compares web development technologies and libraries</p> <p>Identifies solutions and develops solution plans/projects</p> <p>Motivates the identified solutions</p>
Responsibility and autonomy	<p><i>The student's capacity to autonomously and responsibly apply their knowledge and skills.</i></p> <p>Respects academic ethics principles, correctly citing the bibliographic sources used.</p> <p>Is receptive to new learning contexts.</p> <p>Collaborates with peers and teachers in carrying out course activities</p> <p>Shows autonomy in managing the learning/problem solving situation/context</p> <p>Awareness of the value of the contribution to identifying a viable / sustainable solution to solve problems in social and economic life (social responsibility).</p> <p>Analyses and capitalizes on business opportunities in the specializes field.</p> <p>Demonstrates skills in managing real-life situations (time management, collaboration, conflict).</p>

9. Teaching techniques (*Student centric techniques will be considered. The means for students to participate in defining their own study path, the identification of eventual fallbacks and the remedial measures that will be adopted in those cases will be described.*)

Starting from the analysis of students' learning patterns and their specific needs, the teaching process will explore both presentational (lecture, presentation) and conversational-interactive teaching methods, based on discovery and exploration models (experimentation, demonstration, modeling), as well as using exercises, practical activities and problem solving.

Lectures based on Power Point presentations (that will be made available to students) will be used in the teaching activity. Each course will begin with a recap of the chapters already covered, with an emphasis on the concepts covered in the previous course. The first lectures will recap the object-oriented notions studied during the previous semesters.

Presentations rely on images and diagrams, making the information of the lectures easy to understand and assimilate.

This course offers information and practical activities meant to aid th students in their efforts to learn and develop optimal collaborative an communicational relationship in a climate suitable to learning through discovery.

The ability for teamwork in solving different learning assignments will be encouraged.

10. Contents

COURSE		
Chapter	Content	No. hours
1	Introduction to advanced software technologies for communication 1.1. Advanced technologies on Java Standard Edition (SE) platform 1.2. Advanced technologies on Java Enterprise Edition (EE) platform 1.3. Advanced technologies on Java Mobile Edition (ME) platform 1.4. Advanced Java technologies for service oriented architectures	4
2	Advanced software on Java Standard Edition (SE) platform 2.1. Applications based on Java management extension (JMX) 2.2. Applications based on Java SE platform and XML technologies 2.3. Web services access on Java SE platform	4
3	Advanced software on Java Enterprise Edition (EE) platform 3.1. Applications based on Web (Servlet, JSP) and business (EJB) components 3.2. Architectures based on MVC model (Struts, JSF, Spring) 3.3. Solutions for advanced persistence support (JDBC, JDO, JPA) 3.4. Integration solutions based on Java EE (JCA, JMS, JAX-WS)	16
4	Advanced software on Java Mobile Edition (ME) platform 4.1. Java programming on Java ME platform 4.2. Applications of Java TV technology on Java ME platform 4.3. Web services access on Java ME platform	4
	Total:	28

11. Evaluation

Activity type	11.1 Evaluation criteria	11.2 Evaluation methods	11.3 Percentage of final grade
11.4 Course	<ul style="list-style-type: none">- knowledge of fundamental theoretical notions;- knowing how to apply the theory to specific problems;- Differential analysis of theoretical techniques and methods.	<p>Verification during the semester at dates fixed at the beginning of the semester.</p> <p>Final verification during the session.</p>	50%
11.5 Seminary/laboratory/project	<ul style="list-style-type: none">- Ability to design and implement applications for TCP / IP architectures	<p>Development a software project during the semester with presentation of the results and their proper explanation.</p>	50%

11.6 Passing conditions

Obtaining 50% of the total score.

Obtaining a 50% of the score related to activities during the semester.

12. Corroborate the content of the course with the expectations of representatives of employers and representative professional associations in the field of the program, as well as with the current state of knowledge in the scientific field approached and practices in higher education institutions in the European Higher Education Area (EHEA)

Through their activity, students gain the ability to provide solutions to existing problems and propose ideas to improve the current situation in the field of software development, more specifically in the field of advanced Internet software.

The development of the lecture relied on knowledge, theoretical and practical aspects as well as phenomena described by the specialized literature, own published research and the experience of the lecturers.

The course aims to develop the graduates' skills to design and implement new software for the Internet, as well as to analyse, debug and improve existing ones. Thus, graduates of the course can contribute to the economic environment, in the field of advanced Internet applications.

Date	Course lecturer	Instructor(s) for practical activities
	S.I./Lect. Dr. Laurentiu BOICESCU	S.I./Lect. Dr. Laurentiu BOICESCU

Date of department approval	Head of department
27.10.2024	Conf. Dr. Serban Georgica Obreja 

Date of approval in the Faculty Council	Dean
25.10.2024	Prof. Dr. Mihnea Udrea
