

## COURSE DESCRIPTION

### 1. Program identification information

1.1 Higher education institution	National University of Science and Technology Politehnica Bucharest
1.2 Faculty	Electronics, Telecommunications and Information Technology
1.3 Department	Electronic Technology and Reliability
1.4 Domain of studies	Electronic Engineering, Telecommunications and Information Technology
1.5 Cycle of studies	Masters
1.6 Programme of studies	Quality and Safety Engineering in Electronics and Telecommunications

### 2. Date despre disciplină

2.1 Course name (ro)		Asigurarea și certificarea calității și fiabilității					
2.1 Course name (en)		Assurance and certification of quality and reliability					
2.2 Course Lecturer		Prof. dr. ing. Ioan Bacivarov					
2.3 Instructor for practical activities		Prof. dr. ing. Ioan Bacivarov, Dr. ing. Gabriel Petrică					
2.4 Year of studies	1	2.5 Semester	II	2.6. Evaluation type	E	2.7 Course regime	Ob
2.8 Course type	DA	2.9 Course code	UPB.04.M2.O.14-07	2.10 Tipul de notare	Nota		

### 3. Total estimated time (hours per semester for academic activities)

3.1 Number of hours per week	5	Out of which: 3.2 course	3.00	3.3 seminary/laboratory	2
3.4 Total hours in the curricula	70.00	Out of which: 3.5 course	42	3.6 seminary/laboratory	28
Distribution of time:					hours
Study according to the manual, course support, bibliography and hand notes Supplemental documentation (library, electronic access resources, in the field, etc) Preparation for practical activities, homework, essays, portfolios, etc.					78
Tutoring					0
Examinations					2
Other activities (if any):					0
3.7 Total hours of individual study	80.00				
3.8 Total hours per semester	150				
3.9 Number of ECTS credit points	6				

### 4. Prerequisites (if applicable) (where applicable)

4.1 Curriculum	Not applicable.
----------------	-----------------

4.2 Results of learning	Accumulation of basic knowledge in the fields of: quality / reliability, mathematical statistics, standardization and legislation in quality and safety in operation
-------------------------	--

**5. Necessary conditions for the optimal development of teaching activities** (where applicable)

5.1 Course	The course will take place in a room equipped with a video projector and computer
5.2 Seminary/ Laboratory/Project	The applications will take place in a room equipped with computers, the necessary software, Internet access. Attendance at laboratory sessions is mandatory (according to POLITEHNICA Bucharest regulations).

**6. General objective** (*Referring to the teachers' intentions for students and to what the students will be thought during the course. It offers an idea on the position of course in the scientific domain, as well as the role it has for the study programme. The course topics, the justification of including the course in the curricula of the study programme, etc. will be described in a general manner*)

Presentation of the fundamental concepts, the standards in force regarding the assurance and certification of quality and reliability, as well as the audit methods used for this purpose. It creates a solid knowledge base necessary for any quality assurance system analyst. The basic methods used to ensure and evaluate the quality performance of a system and/or process are highlighted. During the applications, students are familiar with the development of the Quality Manual and other documents required for certification, with applications in the fields of electronics and telecommunications.

**7. Competences** (*Proven capacity to use knowledge, aptitudes and personal, social and/or methodological abilities in work or study situations and for personal and professional growth. They reflect the employers requirements.*)

<b>Specific Competences</b>	<p>Demonstrate basic / advanced knowledge of systems quality and reliability assurance and certification</p> <p>Correlate knowledge in the field of standardization</p> <p>Apply the knowledge related to the assurance and certification of the quality and reliability of the systems in practice</p> <p>Apply standardized methods and tools, specific to the field, to carry out the evaluation and diagnosis process of a situation, depending on the identified/reported problems, and identifies solutions.</p> <p>Argue and analyze coherently and correctly the context of application of the basic knowledge of the field, using key concepts of the discipline and the specific methodology.</p> <p>Use scientific vocabulary specific to the field, in order to communicate effectively, in writing and orally.</p>
<b>Transversal (General) Competences</b>	<p>Work in a team and communicate effectively, coordinating efforts with others to solve problem situations of medium complexity.</p> <p>Autonomy and critical thinking: the ability to think in scientific terms, search and analyze data independently, and draw and present conclusions / identify solutions.</p> <p>Ability to analyze and synthesize: presents the acquired knowledge in a synthetic way, as a result of a process of systematic analysis.</p> <p>Respect the principles of academic ethics: correctly cite the bibliographic sources used in the documentation activity.</p> <p>Put elements of emotional intelligence into practice in the appropriate social-emotional management of real-life/academic/professional situations, demonstrating self-control and objectivity in decision-making or stressful situations.</p>

**8. Learning outcomes** (*Synthetic descriptions for what a student will be capable of doing or showing at the completion of a course. The learning outcomes reflect the student's accomplishments and to a lesser extent the teachers' intentions. The learning outcomes inform the students of what is expected from them with respect to performance and to obtain the desired grades and ECTS points. They are defined in concise terms, using verbs similar to the examples below and indicate what will be required for evaluation. The learning outcomes will be formulated so that the correlation with the competences defined in section 7 is highlighted.*)

<b>Knowledge</b>	<p><i>The result of knowledge acquisition through learning. The knowledge represents the totality of facts, principles, theories and practices for a given work or study field. They can be theoretical and/or factual.</i></p> <ul style="list-style-type: none"><li>• Listing the most important stages that have marked the field of assurance and certification of system quality and reliability.</li><li>• Defining notions specific to the field of assurance and certification of system quality and reliability.</li><li>• Describing/classifying notions/processes/phenomena/structures.</li><li>• Highlighting consequences and relationships.</li></ul>
<b>Skills</b>	<p><i>The capacity to apply the knowledge and use the know-how for completing tasks and solving problems. The skills are described as being cognitive (requiring the use of logical, intuitive and creative thinking) or practical (implying manual dexterity and the use of methods, materials, tools and instrumentation).</i></p> <ul style="list-style-type: none"><li>• Selecting and grouping relevant information in a given context.</li><li>• Reasonably using specific principles in order to ensure and certify the quality and reliability of systems.</li><li>• Working productively in a team.</li><li>• Elaborating a scientific text.</li><li>• Experimentally verifying identified solutions.</li><li>• Solving practical applications.</li><li>• Adequately interpreting causal relationships.</li><li>• Analyzing and comparing standards and regulations specific to the assurance and certification of system quality and reliability.</li><li>• Identifying solutions and developing solution/project plans.</li><li>• Formulating conclusions to the experiments carried out.</li><li>• Arguing the identified solutions/solutions.</li></ul>

<b>Responsability and autonomy</b>	<p><i>The student's capacity to autonomously and responsibly apply their knowledge and skills.</i></p> <ul style="list-style-type: none"><li>• Selecting appropriate bibliographic sources and analyzing them.</li><li>• Respecting the principles of academic ethics, correctly citing the bibliographic sources used.</li><li>• Demonstrating responsiveness to new learning contexts.</li><li>• Demonstrating collaboration with other colleagues and teaching staff in carrying out teaching activities.</li><li>• Demonstrating autonomy in organizing the learning situation/context or the problem situation to be solved.</li><li>• Demonstrating social responsibility through active involvement in student social life/involvement in academic community events.</li><li>• Promoting/contributing through new solutions related to the specialized field to improve the quality of social life.</li><li>• Realizing the value of their contribution in the field of engineering to the identification of viable/sustainable solutions to solve problems in social and economic life (social responsibility).</li><li>• Applying principles of professional ethics/deontology in the analysis of the technological impact of the proposed solutions in the specialized field on the environment.</li><li>• Analyzing and capitalizing on business/entrepreneurial development opportunities in the specialized field.</li><li>• Demonstrating real-life situation management skills (collaborative vs. conflict time management).</li></ul>
--	---

**9. Teaching techniques** (*Student centric techniques will be considered. The means for students to participate in defining their own study path, the identification of eventual fallbacks and the remedial measures that will be adopted in those cases will be described.*)

Starting from the analysis of students' learning characteristics and their specific needs, the teaching process will explore both expository (lecture, exposition) and conversational-interactive teaching methods, based on discovery learning models facilitated by direct and indirect exploration of reality (experiment, demonstration, modelling), but also on action-based methods, such as exercise, practical activities and problem solving.

In the teaching activity, lectures will be used, based on PowerPoint presentations or different videos that will be made available to the students. Each course will start with a recap of the chapters already covered, with an emphasis on the concepts covered in the last course.

Presentations use images and diagrams so that the information presented is easy to understand and assimilate.

This discipline covers information and practical activities designed to support students in their learning efforts and the development of optimal collaborative and communicative relationships in a climate conducive to discovery learning.

The practice of active listening and assertive communication skills, as well as feedback construction mechanisms, will be considered as ways of regulating behavior in various situations and adapting the pedagogical approach to the students' learning needs.

Teamwork skills will be practiced to solve different learning tasks.

## 10. Contents

<b>COURSE</b>
---------------

Chapter	Content	No. hours
1	Basic and normative concepts in quality assurance and certification. - The concept of system quality. - Fundamental concepts regarding quality assurance and certification.	4
2	The quality system. - Structure of the quality system. - Human and material resources in quality assurance. - Probabilistic and deterministic methods. - The QFD method.	6
3	The structure of the quality assurance system. - Evaluation of the degree of satisfaction of the beneficiary. - Specifications. - Process monitoring. - Stability, capability, optimization. - Taguchi methods. - The Robust Program. - Quality assurance in research/design. Requirements and specifications.	10
4	Methods of ensuring reliability. - Strategies for increasing system reliability. - Accelerated HALT and HASS trials. - Legal responsibility on the products (liability).	6
5	Quality assurance. - Quality assurance in the production process. - Process capability. Traceability. - Compliance. - Analysis of the costs of non-conformity. - Statistical process control (SPC). - Software quality assurance.	6
6	Certification of management systems. Strategies and norms. - Standardization in the field of quality and reliability assurance. - Certification of quality management systems (ISO 9000). - Certification of environmental management systems (ISO 14000). - Certification of occupational health and safety management systems (ISO / OHSAS 18000). - Certification of IT security management systems (ISO 27000). - Certification of food safety management systems (ISO 22000/ HACCP). - Certification of social responsibility management systems. - The certification system of information management security systems. - Reliability management certification. IEC 300 regulation. - Trends and developments in the field.	8
7	Quality audit. - Internal and external audit. - Audit preparation. The audit questionnaire. - Audit visit. - Post-audit information processing.	2
	<b>Total:</b>	42

**LABORATORY**

Crt. no.	Content	No. hours
1	Statistical control of the production flow	4
2	Comparative analysis of the quality of a product using the QFD method	4
3	HALT (Highly Accelerated Life Tests) / HASS (Highly Accelerated Stress Screening) tests	4
4	Increasing reliability through burn-in tests	4
5	Quality assurance in design. Probabilistic methods: PERT, PERT/TIME, PERT/COST	4
6	Quality assurance in design. Deterministic methods: Critical Path Method, MPM (Metra Potential Method).	4
7	Quality assurance of program products. Using the cause-effect graph. Analysis of the consistency of the requirements and the conformity of the specifications.	4
	<b>Total:</b>	28

**11. Evaluation**

Activity type	11.1 Evaluation criteria	11.2 Evaluation methods	11.3 Percentage of final grade
11.4 Course	Knowing how to apply the theory to specific problems	- homework	20%
	Knowledge of fundamental theoretical notions	- verification test - final exam (written)	40%
11.5 Seminary/laboratory/project	Evaluation of laboratory activity	- laboratory colloquium	20%
	Completion of a research document with a predefined theme	- completion and presentation of research document	20%
11.6 Passing conditions			

**Universitatea Națională de Știință și Tehnologie Politehnica București**  
**Facultatea de Electronică, Telecomunicații și**  
**Tehnologia Informației**
